LASER MASKING & ABLATION

Integrated Technology has been on the cutting edge of Laser Technology for 20+ years. In addition to our laser marking capabilities, we also utilize our lasers for coating ablation of a variety of different coatings. Below are some examples of some of the projects we have been involved with in helping our customers reduce costs, lead-time and common hand masking quality issues.

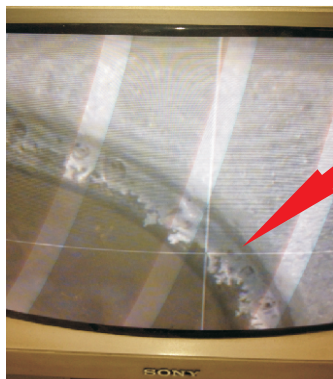

Example of Laser Ablation/Masking on anodized aluminum. This project resulted in a \$9.00 per part savings that also eliminated masking leakage and reduced lead-time

Paint removal inside of oval

Example of Powder Coat removal of build up from plugged hole. Customer was scraping powder using a sharp edge before discovering our technology.
